SUMMARY

I am a dedicated technology professional with a Bachelor of Technology in Information Technology and extensive experience in web portal development and AI solutions. Currently serving as Technical Head at Rajsanyog, I specialize in creating scalable technology platforms for political campaigns while managing home-grown management and AI integration skills, ensuring I bring valuable insights to any project I undertake.

EXPERIENCE

Technical Head

Rajsanyog

06/2025 – Present | Nagpur

- End-to-end web portal development and digital consulting to support political campaigns and organizational needs.
- Implement AI agents and automated tech solutions, including scalable platforms and custom digital tools.
- Startup-focused tech solutions, including scalable platforms and custom digital tools.

AI-ML Virtual Internship

AICTE, INDIA

05/2025 – 08/2025 | Remote

- Completed training in cloud-based data handling and pipeline development.
- Applied data modelling and database management concepts.
- Utilized tools for data cleaning, transformation, and visualization.

Data Engineering Virtual Internship

AICTE, INDIA

07/2024 – 09/2024 | Remote

- Gained practical experience with Python AI frameworks for algorithm implementation.
- Integrated data analysis, predictive modelling, and feature in projects.
- Learned deployment and optimization of AI models in real-world systems.

EDUCATION

Bachelor of Technology(Information Technology)

Shri Ramdeobaba College of Engineering and Management

08/2023 – 05/2027 | Nagpur, Maharashtra

HSC & SSC

Kendriya Vidyalaya

2011 – 2023 | Nagpur, Maharashtra

LANGUAGES

English – Proficient

Hindi – Proficient

INTERESTS

Yoga | Traveling | Cooking | Reading | Exploring

SKILLS

Technical

AI Automation AWS Data Analysis

Python Web Development SQL

Soft Skills

Adaptability Decision-Making

Rhetorical Skills Networking

PROJECTS

Animal Diseases Detection System

07/2025 – 11/2025 | Nagpur

- Built a deep learning model (ResNet50) to detect animal diseases from microscopic images.
- Developed an end-to-end pipeline with OpenCV preprocessing and reduce-time prediction.
- Generated automated reports with disease name, symptoms, and treatment suggestions.
- Created a simple web interface for fast and accurate veterinary diagnosis.

VRAM (Virtual RAM Management Platform)

02/2025 – Present | Nagpur

- Developed a cloud-based virtual RAM system to extend smartphone memory and improve processing performance.
- Built a backend using Node.js to offload app states to cloud containers for fast retrieval.
- Implemented compression and edge serialization to enable 10x connectivity with low latency.
- Improved device performance with fewer app crashes and smoother gaming without hardware upgrades.

CERTIFICATIONS

AWS – Data Engineering

Comprehensive AWS Data Engineering and Cloud Practitioners courses, gaining hands-on experience with core AWS services.

Google Data Analytics (Coursera)

Completed the Google Data Analytics Professional Certificate by Google, gaining insights with SQL, spreadsheets, Tableau, and R for data-driven decision-making.

Programming in Python (Coursera)

Proficient in Python programming for data processing, automation, and application development.

Software Engineering Job Simulation (Forage)

Interfaced with a live stock price data feed to process real-time market data, used JPMorgan Chase & Co. frameworks and tools to build and test features, created interactive visual dashboards for traders to track pricing trends, and completed a small open-source contribution by submitting code updates and fixes.
